### Features:

### Benefit:

#### English Dovetail→ Construction

English dovetails on the drawer front and back create a tight fit and adds exceptional holding power. This keeps the drawer tight and snug after thousands of pulls.

#### Floating Tops→

This type of construction is incorporated into every Kincaid product to allow expansion and contraction of the solid wood components as the humidity changes in your home.

#### Mortise and Tenon Joints→

Kincaid's case construction features mortise and tenon joinery, a time proven method of assembling two parts at a 90 degree angle.

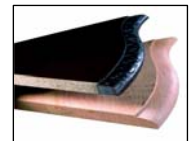

#### Drawer Guides→

A wood-on-wood non-tilting, dovetailed drawer guide is used in the installation of all Kincaid drawers.

#### Solid Wood Edges→

Shaped edges are constructed of solid wood, unlike many manufacturers who use banded veneers, to provide premium quality and durability.

#### Adjustable Glides→

Adjustable glides are provided on all units for leveling doors and on select units for a center support.

#### Floating Panels→

Raised panel doors and bed panels utilize a floating, self-centering construction technique.

#### Finger Joints→

All Kincaid solid wood chairs are crafted using a glue and screw technique across a finger jointed corner, adding strength to the chair while minimizing flex across the joint.

#### Front Posts→

Where the design allows, heavy front posts are used for additional case stability and strength.
