

# *An Eco-Conscious Approach to Lighting*

*For 2009, we're introducing an all new line of eco-conscious lighting designs  
...and reviving some of our most popular designs  
with environmentally responsible materials and lamping.*

## ***Sustainable Bamboo***

Both new designs and updated favorites are created from Bamboo, a renewable, sustainably harvested natural resource that requires no fertilizer or pesticide to thrive.

## ***Energy Efficient Lamping***

In all of our new lighting products and most of our updated models, we incorporated standard fluorescent lamping, which lasts up to 10 times longer and uses up to one-third less energy than incandescent.

## ***Recyclable Packaging***

All products in this catalog are safely and securely packed with recyclable cardboard, eliminating the need for styrofoam packaging.

***ENERGY STAR®***

Cherry Tree Design has partnered with Energy Star, the most powerful program for improving the environment through energy efficiency. Look for introductions which have earned the Energy Star.
