Radiance® Bath Surface Heating System

Radiance® is the patent-pending innovation from MTI that applies radiant heat technology to tubs and seated shower bases. For tubs, it warms the interior surface of the bath for neck, shoulders, back and bottom. It provides an even distribution of warmth to eliminate the shock of a cold tub and increases relaxation during the bath. Radiance will also help keep the bath water from losing its warmth as quickly. For seated shower bases, Radiance will warm the seat and main area of the floor. The peak temperature of Radiance is approximately 100° F.

Radiance is controlled by a simple ON / OFF switch that also allows selection of area(s) to be heated. Radiance utilizes electric heating grids to provide radiant heat for the bath or shower base surface. Radiance operates on 24 volts and plugs into a 110-volt, 15 amp GFCI outlet. Since Radiance uses only about as much energy as a standard light bulb, leaving it on will ensure a warm bath shell whenever the user chooses to bathe.

The Radiance system includes electronic heating grids for 2 zones, plus all of the electronic controls. So in a 1-person tub, one Radiance system would be used for the back and bottom areas of one end of the tub; or both back areas of a 2-person tub. The customer could also choose 2 systems, which would cover both the back and bottom of each end of a 2-person tub.

When ordering Radiance on tubs equipped with whirlpool and / or air bath packages, call MTI for compatibility and installation possibilities.

Radiance can be installed in a freestanding tub. The standard installation locates the transformer between the walls of the tub. Alternatively, if requested, the transformer can be mounted externally, for installation underneath the floor, next to the bath or no more than 5 feet away. In this application, the transformer needs a small amount of air circulation. In all installation situations for both tubs and seated shower bases, access to the transformer needs to be provided.

Radiance is factory-installed and fully integrated in the acrylic shell structure. Radiance is available on all MTI tubs except Primm and Solid-Surface tubs. Like all other options offered by MTI, the warranty period is 2 years / parts only.
