

Adjustable Standoff without Connector

Shown approximately 30% actual size.

DESCRIPTION

To ease Single-Circuit T~trak™ installation in spaces with high and/or uneven ceiling surfaces, use adjustable standoffs to adjust height and level of the system. Adjustable standoffs are not recommended on curvy runs or on runs with heavy heads, such as die cast ceramic metal halide heads.

INSTALLATION

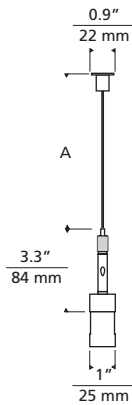

The adjustable standoff without connector is used in the center of a track section or at the end of a run. A wire grip allows you to easily shorten or lengthen the cable to size it for use.

FINISH

Antique bronze, satin nickel, white.

WEIGHT

0.55 lb./0.25 kg. ±
