

Crown Verity Heaters VS. Other Heaters

CROWN VERITY	OTHER HEATERS
ALL CROWN VERITY HEATERS HAVE A WIDER WHEEL BASE THAN OUR COMPETITORS DO - improves stability while being transported.	Most other heaters don't have wheels or they must be purchased at an extra cost. Some heaters have square or hexagonal bases that cannot be moved. Other wheel bases are narrow = instability.
All Crown Verity Heaters have all stainless steel fasteners .	Most imported units have plated screws.
All Crown Verity Heaters use stainless steel machine screws for added durability.	Most other heaters use sheet metal screws that strip or cross thread easily.
All Crown Verity heaters connect the burner head directly to the hose & regulator assembly. - No other feed lines.	Other heaters use a variety of feed lines. With a higher chance of assembly error & gas leaks.
Crown Verity Heaters have all stainless steel double grate conical burners for higher output and a very consistent glow over the entire emitter surface.	Others use inferior stainless steel, which rusts. Some use just an orifice to act as a burner.
Crown Verity Heaters use all 300 Series Stainless steel for emitter grids.	Most other heaters use a much lower grade stainless which is prone to distortion or rusting.
New heavy duty 16 gauge rigid aluminium reflectors offer superior structural integrity.	Other heaters use a lighter 18 or 20 gauge reflector, which are easily dented and damaged. Some use reflectors that must be assembled and are quite weak & damage during shipping!
100% TESTED BURNER HEADS	Most others don't. This is a major flaw in other heaters. More service issues and Dead on Arrival (DOA)
Crown Verity offers an easy method of removing the head for service.	Most inexpensive heaters are very difficult to work on.
Larger Tank Compartment - easily accommodates up to 30 Lbs.	Other patio heaters accommodate 20 Lbs maximum.
Crown Verity Heaters are 85% assembled.	Most other heaters require much more assembly.
Crown Verity heads are designed to have better combustion at the burner head.	Most other heaters have poor combustion and are very sensitive to even the slightest breezes.
Crown Verity stocks replacement parts.	Good luck getting parts or service!
Improved Failsafe Pilot system - very resilient + fewer service calls & DOA's	Others are vulnerable to contamination & eventual failure.
100% Safeguard shut off & added Anti-Tilt cut-off Switch	Other brands do not have Anti-Tilt cutoff Switch.
Heavier gauge construction throughout - New style dent resistant body is 18 gauge.	Others use lighter gauge metal for the body resulting in damage and dents.
CROWN VERITY IS DEDICATED TO THE OUTDOOR & PORTABLE FOODSERVICE EQUIPMENT MARKET. We have been since 1991.	Most competitors are in the business a year or two and then they're out. Again, parts are very difficult to come by.
